

CASING CONDITIONER

Complementary Finishing Scraper Tool

HAMDEEN

©2003

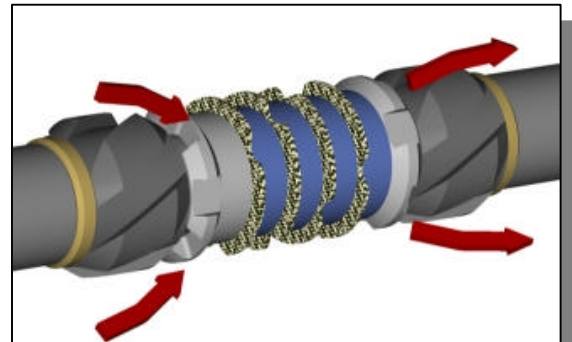

Description

A down hole tool for the preparation of casing particularly to compliment Hamdeen's Scimitar scraping tool. The Casing Conditioner utilises composite blades to provide a finishing cleaning sweep of the casing bore particularly in areas of greater significance such as packer setting areas and perforated intervals.

Hamdeen's Casing Conditioner offers a long awaited alternative to wire brush tools which demonstrate a poor efficiency due to inherent disadvantages such as clogging and loss of wire strands.

Features

- Through rotational configuration
- Full through bore
- Robust construction
- 360° coverage
- Dual fluid by-pass
- Multi-composite blade construction
- Composite blade cartridge floats to retain concentricity with casing

Internal Fluid By-Pass

Advantages

- Effective finishing cleaning sweep of casing
- Complements aggressive scraper
- Cleaning blades remain effective
- No loss of blade integrity
- Tool remains effective in deviated sections

Properties (9⁵/₈" Casing Tool)

- Overall length: 59" (4'-11")
- Body OD: 7-1/4"
- Sleeve OD: To Tubing Drift
- Connections: 4-1/2" IF Box x Pin

*Kevlar-Carbon Composite
Blades with By-Pass*

Patent Pending
